

THE ESSENTIAL OPENTEXT CEM COMPANION

Managing a complex OpenText Customer Experience Management installation can be challenging. Siterise unifies and simplifies all of your OpenText Web Experience Management, Portal, and Tempo Social environments, providing single-console access to Development, Staging, and Production. Developers will move faster.

Operations teams will work safer. Managers will save time and money. Rise above your CEM challenges – download Siterise today!

SITERISE AT A GLANCE

FEATURES:	BENEFITS:
Comparison	Troubleshoot problems and increase certainty with deployments by comparing all assets on Development, Staging, and Production. The merge facility lets you quickly transfer files and the two-pane editor lets you compare selectively merge individual differences.
Source Control Integration	Tightly manage your deployments with the integrated source control system that allows teams to work together efficiently and avoid the problems of lost code and having multiple developers working on the same project.
Drill Down and Search	Browse through all of your assets across your entire site network and quickly access images, code, and configuration. Search through all of your assets no matter where are. Siterise indexes your components so they can be found quickly.
Drag-and-Drop	Siterise lets you drag and drop components from instance to instance or to your desktop,. Get your work done faster with less frustration.
Targeted Deployments	Reduce downtime and risk by using Siterise to create custom deployment packages and eliminate the need to perform full site export and imports.
In-Line Editing	Be more productive by using a syntax-highlighted source editor to quickly make changes to JSP, XSL, HTML, JavaScript, CSS, PBD, and any configuration files or properties.
Component Repackaging	Reduce downtime and risk by creating a right-sized deployment packages, eliminating monolithic full site import/exports.
Read/Write	Siterise helps you protect your critical production assets by allowing you to control different levels of access to different parts of your environment.
Configuration	Configuration files and database-persisted properties can be graphically modified in the highlighted editor. Cross instance configurations can be compared, synchronized, and merged.
Analytics	Gain access to valuable usage charts and reports without sending data to third-party systems. Expose back-end system diagnostic metrics.
Application Server Control	Manage your Application Server restarts via scriptable controls that work with processes that you already have in place.
Monitoring	Siterise monitors your log outputs from a central, searchable, color-coded log viewer. Exceptions jump out in bright red, quickly highlighting problems.
Web Experience Management	Use Siterise to make changes to your WEM Display Templates. Making modifications to JSP and XSL display views with the inline editor is a snap, allowing you to see and tweak your changes instantly.
Tempo Social Integration	Tempo Social installs over 70 different portlets into the OpenText Portal. Siterise helps you manage that complexity, especially as changes are needed.
Other Portlets	Control both Content Server and Media Manager portlets from a single location and control how they are deployed to your portal.
